

The starting point for
zero surgical site infections.

ScopeTrac Endoscope Tracking & Reprocessing Data Management

ScopeTrac electronic tracking & management system for reprocessing endoscopes can capture your reprocessor's data feed making it an essential part of the complete patient safety record.

With ScopeTrac you can fulfill all the new guidelines for handling endoscopes issued from the FDA, CDC and the VA, with review from JCAHO and AAMI "Preventing Cross-Contamination in Endoscope Processing":

- Document all scope inventory including loaners
- Provide staff with accurate, up to date procedures for each scope type
- Track maintenance on all scopes
- Assure disinfection and decontamination prior to each use
- Record reprocessing and utilization details

ScopeTrac can easily expand functionally with the addition of all other Censitrac® modules.

Censitrac®'s web-based, software-as-a-service automated tracking systems ensure all your surgical instruments, trays, endoscopes and mobile equipment are tracked through proper reprocessing while increasing OR efficiency and optimizing the useful life of your OR assets. With more installed customers than any other instrument tracking system Censitrac® aligns OR efficiency and infection control putting you on the path to improved patient safety.

Censitrac® Suite of Surgical Tracking Solutions

Add Functionality as Your Needs Grow with Additional Censitrac® Modules:

InstrumenTrac – Electronic tracking & reporting system for surgical instruments.

TrayTrac – Electronic tracking for tray sets and peel packs.

SterilTrac – Fully automated sterilization data management in SPD and OR.

MobileTrac – RFID or scanner tracking of mobile equipment assets.

The starting point for
zero surgical site infections.

ScopeTrac Features

Inventory Control & Optimization

- Master catalog provides at-a-glance view of entire endoscope inventory status and location.
- 3 instrument identification options: marking; manufacturer's serial numbers; or tags.

Workflow Efficiency & Increased Patient Safety

- Manufacturers' and customer-generated instructions for every endoscope in your inventory automatically appear on screen when specific endoscope ID is entered or scanned.
- Data capture from leak tests and disinfection processes for every endoscope provides comprehensive recordkeeping.
- Captures load records from endoscope processing equipment.
- Location and case tracking updated in real-time.
- Preventive maintenance alerts cue staff when equipment needs attention.
- Reprocessing instructions and media help guide and train technicians.

Administration Tools for Benchmarking & Continuous Improvement

- Extensive standard and custom management reporting:
 - Summaries and details for inventory, maintenance, utilization, location, etc.
 - Data can be exported to Excel for integration with other information and further analysis.

For a decade Censis Technologies, Inc. has been the leader in surgical instrument tracking and data management for hospitals in North America and abroad.
