Reduce **TCO with standardised device configuration and acceptable usage policies.**

Protect **devices by locking, tracking and wiping them remotely.**

# Mobile Device Management A guide for Healthcare.

As smartphones and mobile devices replace the PC, organisations can benefit from increased productivity (staff reading emails on personal devices and accessing corporate information remotely), reduced operating costs, increased response times, greater flexibility, reporting and productivity.

Airwatch, the class-leading enterprise solution for managing smartphones and mobile devices allows you to empower your staff, manage sensitive data on devices remotely and avoid the associated risks.

## Why Airwatch?

- Class leading multiple Mobile OS support; iOS, Android, Windows Mobile, Blackberry (RIM) & Symbian
- Single Web Browser based console for central management of all devices
- Supports hierarchical grouping of devices (e.g. by Organisation, Site, Department, User Type, etc.)
- Scalable Behind The Firewall & Software as a Service installations from 10s to 10,000s of devices
- No Server Software License Fees
- Low cost per client license fee & annual maintenance charge, or monthly SaaS charge with no minimum term
- Free 30day trial
- Simple Over-The-Air device enrolment; send URL to User's device via SMS or Email.
- Create Organisation specific Apps Stores with enterprise developed and recommended publicly available applications
- Comprehensive Reporting & Alerting capabilities (e.g. non-compliant & jail broken devices)
- 100,000s of devices deployed by almost 1000 organisations globally
- Well established development links with the Operating System vendors ensures the latest OS functionality available

## Benefits

- Enforce Acceptable Use Policy through device encryption and compliance
- Ability to push out corporate WiFi encryption & passkeys
- Ability to push out corporate email settings
- On device Email encryption
- Enforce device Passcode/PIN locking for lost or stolen devices
- Use employee owned devices by enforcing corporate policies on personal smartphones
- Fast rollout of standardised profiles by groups, user and device type.
- Reporting & alerting of unapproved applications
- Restrict device features & applications, for example screen capture &/or camera use (device &/or platform dependent)
- Remote device locking &/or wiping to enforce data protection policy
- GPS breadcrumbing provides device location history
- Remote control of Windows Mobile devices for User support
- Avoid need for employees to have organisation owned devices
- Reduces Support Desk workload by standardisation and centralised management

# Mobile Device Management Free 30 day trial.
