

Professional Services

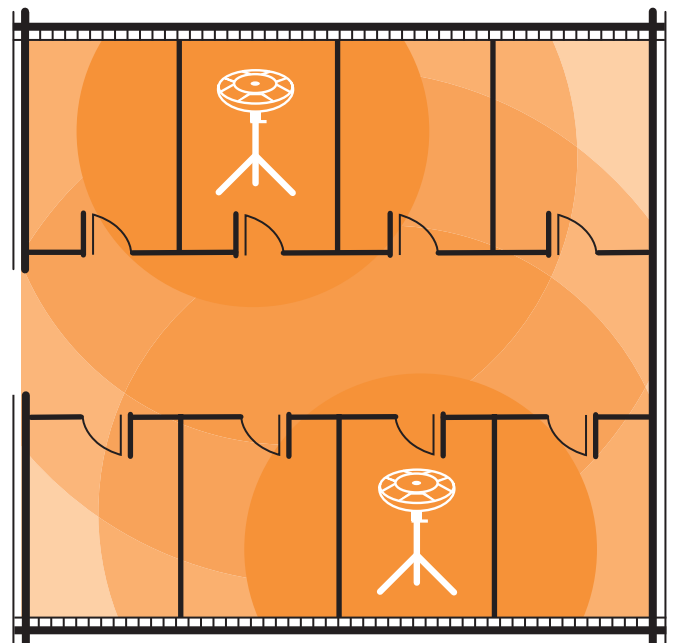

Xirrus will not charge to get your wireless network designed and implemented.

SITE SURVEY

Xirrus will determine the number and location of Arrays required to meet your wireless design (coverage, performance, and user capacity).

- **Onsite with Real Equipment**
We will come to your facility to perform a real-world survey using actual product mounted on tripods.
- **Live Coverage & Capacity Analysis**
We will measure actual performance of the network to ensure desired coverage, capacity, and bandwidth.
- **Interference Analysis**
We will scan and identify potential interference problems around your site and help to eliminate or mitigate them.
- **Signal Strength Guarantee**
We will guarantee the signal strength as outlined in the site survey and network plan we present to you.

SECURITY SCAN

Xirrus will scan your RF environment to identify potential security threats to your wireless network.

- Identify potential rogue APs and Ad Hoc stations
- Identify APs operating with weak or no security enabled
- Identify APs operating on non-traditional channels

INSTALLATION & CONFIGURATION

Xirrus will work with you to ensure the wireless network is installed properly and optimally configured.

- Stage and configure Wi-Fi Arrays
- Assist with product installation
- Optimize the final system configuration

VALIDATION

Xirrus will re-scan your facility to validate proper signal strength and performance per the agreed upon plan.

- Verification of coverage and performance to plan
- Test and verify operation of all Xirrus components
- Test and verify Wi-Fi network operation

TRAINING

Xirrus works with you to ensure you and your staff are trained on all aspects of the wireless network.

- Wi-Fi technology
- Installation and configuration
- System troubleshooting

Example of Wi-Fi Array Network
